Innovative Mathematics Experiment

QUESTION:

Projectile Motion Analysis

NAME: DEMO

USN: DEMO

SECTION: DEMO

EXPERIMENT CODE:

```
import numpy as np
import matplotlib.pyplot as plt

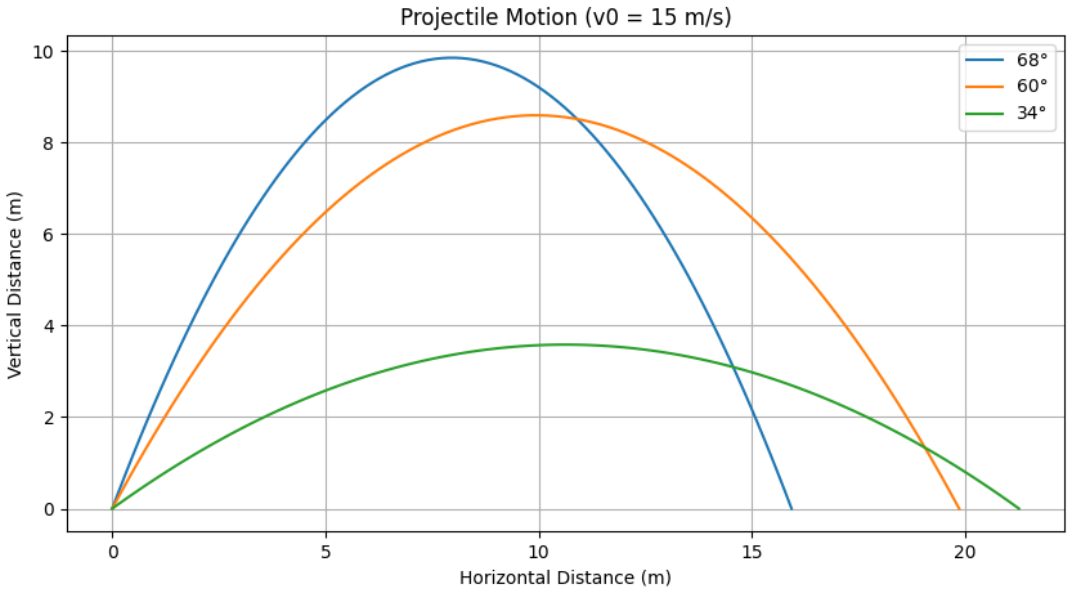
def projectile_motion(v0, theta, g=9.81):
    theta_rad = np.radians(theta)
    t_flight = 2 * v0 * np.sin(theta_rad) / g
    t = np.linspace(0, t_flight, 100)
    x = v0 * np.cos(theta_rad) * t
    y = v0 * np.sin(theta_rad) * t - 0.5 * g * t**2
    return x, y, t_flight

v0 = 15  # Initial speed in m/s
angles = [68, 60, 34]  # Launch angles in degrees

fig = plt.figure(figsize=(10, 5))
for theta in angles:
    x, y, t_flight = projectile_motion(v0, theta)
    plt.plot(x, y, label=f"{theta}°")
plt.xlabel("Horizontal Distance (m)")
plt.ylabel("Vertical Distance (m)")
plt.title(f"Projectile Motion (v0 = {v0} m/s)")
plt.legend()
plt.grid()
plt.show()
```

OUTPUT WITH GRAPH:

Innovative Mathematics Experiment



RESULTS:

Initial Speed (v0): 15 m/s

Angle 68°: Time of Flight: 2.84 s | Max Height: 9.86 m | Range: 15.93 m

Angle 60°: Time of Flight: 2.65 s | Max Height: 8.60 m | Range: 19.86 m

Angle 34°: Time of Flight: 1.71 s | Max Height: 3.59 m | Range: 21.27 m
